Google Careers

Responsibilities:

- Collaborate with stakeholders to understand business requirements and translate them into technical specifications for system development or enhancement.
- Analyze existing systems and processes to identify areas for improvement, automation, or optimization.
- Design and document system workflows, data structures, interfaces, and user interfaces, ensuring alignment with business needs and best practices.
- Collaborate with development teams to ensure the successful

implementation and deployment of system changes or new solutions.
- Develop and execute test plans and scripts to validate system functionality, performance, and security.
- Conduct system integration testing and work closely with Quality Assurance teams to identify and resolve any issues or defects.
- Create and maintain accurate and up-to-date system documentation, including requirements specifications, design documents, user manuals, and training materials.
- Provide user support and troubleshooting assistance, investigating and resolving system-related issues or inquiries.
- Collaborate with cross-functional teams to ensure system compliance with security and regulatory standards.
